

Temporary Works

Objective

To prevent fatalities, eliminate or minimise the risk of injuries and incidents due to the risks associated with structural failure of temporary and permanent load bearing and non-load bearing structures (access gates, scaffolding, formwork, fencing, concrete, demolition work or structural steel) that may result in serious injury or fatality to workers and members of the public.

Requirements

At Haslin Constructions:

1. We conduct and document risk assessments to identify and eliminate reasonably foreseeable hazards associated with temporary works.
2. We manage the risks to people through appropriate planning, communication, monitoring and review in accordance with approved temporary works designs.
3. We ensure that all temporary works are designed and certified by qualified engineers before use.
4. We maintain detailed up-to-date drawings and plans for temporary works.
5. We ensure that changes to designs are authorised by the designer prior to the change being made.
6. We ensure that materials and components are compatible, inspected and certified prior to being installed or altered.
7. Components must be installed by competent persons as per the design and/or installation instructions.
8. We ensure that an adequate exclusion zone or overhead protection is in place for demolition works or any other controlled method of structural deconstruction where there is a risk of structural collapse beyond the applicable area.
9. We ensure temporary works installations are regularly inspected for adequacy and compliance to the design.
